

# LinkCONN

Making It Easy To Connect Multiple Devices

## About LinkCONN

LinkCONN is a communication protocol for connecting devices. It intends to provide a standard set of messages and commands that devices from different vendors can understand. These messages and commands allows controllers and equipment to exchange information and use the information to act intelligently. It intends to provide standards for either wired or wireless connectivity.

Our communication protocol module creates easy way for multiple devices to connect with each other. It gives one the potential to control the way devices communicate through data transmission protocol.
